Advanced Features

Digital Gauge Low, Window & High Set Points PumpMate 2010 script programming provides digital switch gauge functions for Low, Window and High set point detection. Digital gauge combinations include flow, pressure and differential measurements, to name just a few.

SCADA Modbus Compatibility Modbus is the standard communication protocol in the PumpMate 2010 that provides a seamless interface and full compatibility with industry SCADA data acquisition systems and on-line, web based monitoring and control services.

Wireless Sensor and Control Connectivity Local wireless networking extends the reach of the PumpMate 2010 to sensors and controls up to 1000 ft. from the base unit using OKC's AeroMate™ line of wireless sensors and controls.

AGA-3 1992 Gas Flow Measurement PumpMate 2010 scrip programs include a gas flow measurement function that conforms to the AGA-3 1992 standards to provide stable, accurate gas flow rate and volume calculations

Introduction

Multi-Function Hardware The PumpMate 2010 is a multi-function controller that includes 3x digital inputs (DI's), three (3) internal 2000 psi pressure sensors and single or dual solenoid valve support.

Customizable Programs and LCD Displays With OKC Products, Inc.'s Integrated Device Manager (IDM) and web based version control system, the PumpMate 2010 is fully customizable to meet any simple or complex application.

Configurable Analog Inputs Analog sensor input calibration includes zero voltage, maximum voltage and output scale to accept most industry standard voltage output transducers.

Configurable Digital Inputs Digital inputs configuration allows for normally open (NO) or normally closed (NC) switch sensors with TC filtering.

Advanced Solar Charging Advanced solar charging technology provides rapid charging of the 5 A-Hr Nimh battery pack in both sunny and cloudy weather conditions.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Control Panel

A 32-character LCD display provides information on current operating status, stored well operating data, and verifies user keypad commands. Large, colored control keys simplify user setup and control. Captive panel screws and a hinged control panel provide easy access to internal assemblies and sensor hookup.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Keypad Array

PWR Key

PWR

PWR key toggles power On and Off.

Initial display allows entering BIOS menu.

PRESS SET KEY TO CONFIGURE ...

SET

The initial power up display allows one second for a user to press the SET key and access a BIOS setup menu. See Advanced User's Guide for setup details.

Ready display shows contact information.

GoTo Key

GoTo

The orange GoTo key is used to manually override controller operation to "go to" the next OFF or ON cycle.

GoTo key toggles to OFF if current cycle is ON.

**| OFF
ToGo 002:58:13**

GoTo key toggles to ON if current cycle is OFF.

**/ ON
ToGo 002:58:13**

2-Valve
Option

If the 2nd Valve option is installed, each GoTo key press will toggle between the two 1st and 2nd valve control states.

Internal Pressure Sensors

Three (3) internal 2000 psi pressure sensors are provided for wellhead Tubing (TBG), Casing (CSG) and Sales Line (SLS) connections. Outside bottom interface fittings are Stainless Steel ¼-NPT Female threads. Always use a ¼" Back Up wrench when making sensor connections.

AUX Key

AUX

The blue AUX key provides access to system information and setup menus.

Battery, Network Module and Valve Control voltages.

**BAT V33 EVS
2.54 3.32 4.45**

Control panel max, min and current temperature.

**TMP MAX MIN
072 132 -15**

Wireless network link status.

**DEV Link
CO YES**

Module Id., Firmware and Contact data.

**Press <> For
MODULE Info**

Use the Cursor (<>) key to access the AUX sub-menus. The information in the AUX menus are for information only.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

DATA Key

DATA

The DATA key provides menus for viewing current status and well data.

Current status and action indicators such as PGR (^) and HP OVR, etc.

**/ ON
ToGo 000:47:18**

Sub-Menu shows well TOTALS data. OFF and ON times, counts and percentages.

**| Press <> For
TOTALS Data**

Sub-Menu shows the current PGR status, Yes/No count and last 10 arrival times.

**/ Press <> For
PLUNGER Data**

All three internal psi sensors on a single display.

**| CSG TBG SLS
1013 0754 0187**

Digital input displays status of all three switch inputs.

**/ PGR LP HP
Off Off Off**

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

SET Key

SET

The SET key provides setup menus to set cycle times, set points and clear stored data..

Set five cycle times.
 ... OFF time
 ... FALL time
 ... BakUp time
 ... ON time
 ... DELAY time

OFF
 TIME 001:28:37

Access sub-menu to setup LOW and HIGH gage set points.

/ Press <> for
 Gage Setup

Count plunger only option. Up or Down key toggles No/Yes.

PLUNGER
 Count Only: No

Clear stored data TOTALS. Up or Down key toggles No/Yes.

/CLEAR
 Stored Data No

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Internal Hardware

Internal solenoid valve assemblies (V1, V2), power module with four rechargeable Nimh AA batteries (BP1, BP2), three (3) internally mounted pressure sensors and control panel hookups are easily accessed by opening the hinged control panel.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Navigation Keys

The beige navigation keys are used to set cycle times, set points and toggle display selections. When an entry is selected, a position cursor will appear in the display to indicate the item or value that may be modified using the Up/Down arrow keys.

Entry Update

Entries or changes made to cycle times and other parameters with the SET keys are automatically updated and stored as changes are made. Changes in any cycle time will not alter or change the current operating cycle time, but rather update to the new time on the next activation of the timing cycle.

Setting Zero Time

When setting times to zero, it is best to begin by setting the HRS to zero, then setting the MIN to zero, and lastly setting the SEC to zero.

Roll Up, Roll Down Feature

A "Roll Up / Roll Down" feature is used to automatically adjust hours, minutes and seconds time. For example, subtracting one minute from the time display 001:00:00 will Roll Down the display to show 000:59:00. A Roll Up works opposite of a Roll Down.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Motor Valve Out Ports

Rear panel 1/4-NPT fittings supplies 0-100 psi supply gas to open one or two diaphragm operated motor valves. Bottom panel 1/4-NPT fittings vent pressurized gas from normally closed (NC) motor valves to shut-in one or two motor valves. Use clean, dry supply gas with filters for best performance.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Valve Assembly

Single dual-port valve assembly including fittings. Note green wire to solenoid left for proper assembly.

Solenoid armature assembly with conical spring. Armature has rubber gaskets on top and bottom.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Analog Inputs

- +12V** Analog sensor power (+12Vdc)
+12V connects to sensor +V or +EXC.
 - AN1 – Gnd** Typically TBG pressure transducer.
AN1 connects to sensor SIG or OUT.
Gnd connects to sensor COM or -EXC.
 - AN2 – Gnd** Typically CSG pressure transducer.
AN2 connects to sensor SIG or OUT.
Gnd connects to sensor COM or -EXC.
 - AN3 – Gnd** Typically SLS pressure transducer.
AN3 connects to sensor SIG or OUT.
Gnd connects to sensor COM or -EXC.
 - AN4 – Gnd** Typically FLO Rate Transmitter.
AN4 connects to sensor SIG or OUT.
Gnd connects to sensor COM or -EXC.
- Input zero offset, full scale and range are settable for any voltage type sensor output in the range of 0 Vdc to +5Vdc.

Doc. No. 9208-2089311 www.okcproducts.com 10/30/13

Digital Inputs

Gnd = Common Ground

- SW1 – Gnd** Typically plunger (PGR) arrival sensor.
SW1 connects to sensor SIG or +.
Gnd connects to sensor COM or -.
- SW2 – Gnd** Typically high ON override (HP) switch.
SW2 connects to switch gage HIGH.
Gnd connects to switch gage COM.
- SW3 – Gnd** Typically sales line Hold (SP) switch.
SW3 connects to switch gage HIGH.
Gnd connects to switch gage COM.

Although typical digital input (DI) functions are noted above, the SWx inputs may be configured as required, including functional response, active high (NC) or active low (NO) and input filtering using a Time Constant (TC) response delay.
